Are you compliant with the PCI DSS?

it governance™

Verizon's 2015 PCI Compliance Report reveals that companies are struggling to be secure.

80%
of tested companies **failed** their interim PCI compliance assessment.

Of all the data breaches investigated over the last **10 years**,
NOT A SINGLE COMPANY
has been found
COMPLIANT
at the time of the breach.

2/3
of organisations **did not** adequately **test** the security of all in-scope systems.

31%
of confirmed data breaches over the last three years involved **POS intrusion**.[1]

38%
of POS hacking attacks involved **stolen credentials**.[1]

9%
of breached organisations were compliant with **Requirement 11**.
Regularly test security systems and processes

None
of breached organisations complied with **Requirement 6**
Develop and maintain secure systems and applications
or **Requirement 10**.
Track and monitor all access to network resources and cardholder data

Only
28.6%
of companies were found to be still
FULLY COMPLIANT
less than a year after successful validation.

Complying with the PCI DSS is hard.

The majority of organisations that initiate a PCI DSS program for the first time fail to fully appreciate the impact it will have on their organisation, in terms of its scope, the resources and the time it takes.

As an approved QSA, we can help you meet the challenges of PCI implementation, including the development of security policies, procedures and testing mechanisms, enabling you to be compliant every day of the year.
